

Make your impact – iGEM Stockholm project 2021

Synthetic biology: a field of science that involves redesigning organisms for useful purposes by engineering them to have new abilities (definition from National Genome Human Research Institute)

Hi!

We are iGEM Stockholm 2021 - a team competing in the synthetic biology competition iGEM. We are in the process of choosing our project idea consisting of a problem, and a solution. We need your help! We are searching for a problem that affects your local community, the science community or the global population that we can solve.

Examples: Previous iGEM teams have tried to solve problems such as: resistance to antibiotics or plastics in our oceans. More examples can be found at:

https://igem.org/Main_Page

We are looking for problems in areas such as environment, diagnostics, food & nutrition, software, manufacturing or something totally different! What are your thoughts? Do you know a problem - big or small - that needs a solution?

Thank you for filling out this form and using your opportunity to affect our project!

What problem would you like us to solve? *
